

# How TS800 SE Can Work for You

## Direct-Attached Storage Solution

Whether you are looking to expand storage on a Window, Mac or Linux based workstation or a server, the EnhanceBOX TS800 SE can accommodate them all. You can increase workstations and servers capacity on the fly by connecting TS800 SE with PCI-E RAID controller card to your workstations to instantly gain 8TB, 12TB or 16TB of additional storage capacity with superior performance.

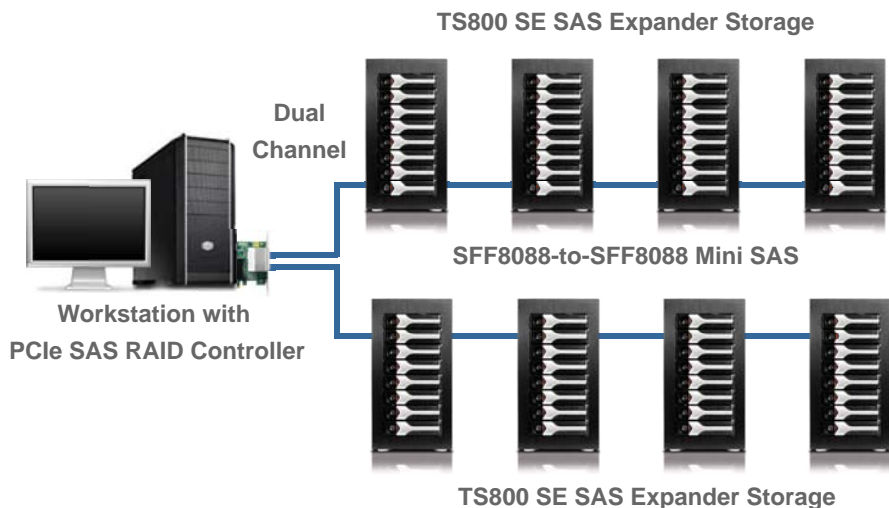

## Fault Tolerance & Double The Bandwidth

The EnhanceBOX TS800 SE features dual Mini-SAS host interfaces that allow users to connect TS800 SE to the host workstations through two channels, meaning that the TS800 SE can provide I/O redundancy to ensure data accessibility while doubling the bandwidth for better performance.

## Expand as Your Grow

Where economy meets flexibility with the EnhanceBOX TS800 SE. It is a scalable storage solution that can be expanded through daisy-chain multiple TS800 SE units to go along with your growing storage needs. Its flexibility allows directly attached to workstations via two channels or connect with single channel to the host for double the expansion channels.

## Compatibility Matrix

Category	Qualified Model	Interface	Enhance Storage Product	Tested OS
SAS RAID Controller	Highpoint RocketRAID 4322	PCI-E 3G/s SAS	EnhanceBOX TS800 SE	Windows & Mac
SAS RAID Controller	Areca ARC-1680X	PCI-E 3G/s SAS	EnhanceBOX TS800 SE	Windows & Mac
SAS RAID Controller	LSI MegaRAID 9280-8E	PCI-E 6G/s SAS	EnhanceBOX TS800 SE	Windows

Note: The compatibility matrix is continually updating. If you can not find your HBA model on this capability matrix, please contact us for verification.
